

Manual Ink Presetting

Reduce Make-Ready Waste

Easy to Read Ink Key Report

Ink Values Right on the Plate

Plugin to any Harlequin RIP

Faster Processing & Better Naming

Plugin to any Harlequin RIP

Key-it will plugin into any Harlequin RIP regardless of the brand as well as the platform. Calculating the ink preset in the RIP is the fastest and most accurate method since Key-it accesses the actual data being used for plate or film production.

Reduce Make Ready Waste

According to recent research, using an ink presetting method can reduce your make-ready waste anywhere from 20% to 50%. Reducing paper waste and ink waste will save you money. Coming up to color faster and more easily will improve production and quality.

Easy to Read Ink Key Reports

Key-it will generate an ink key report that makes it easy to preset inking on any press. There is no need to upgrade press components or purchase anything new for the press. Key-it allows anyone to take advantage of cost savings associated with ink presetting.

Ink Values Right on the Plate

Key-it can be setup to image the ink values directly onto the plate. The pressman can easily see the ink values and adjust accordingly at the same time as hanging the plates on press.

Faster File Processing with Better Naming

The Key-it plugin will create the 1-bit TIFF file for the plate at the same time as it makes the ink key report. Key-it makes TIFF files faster than the standard Harlequin TIFF Plugin and as an added bonus, Key-it offers superior file naming and job sorting.

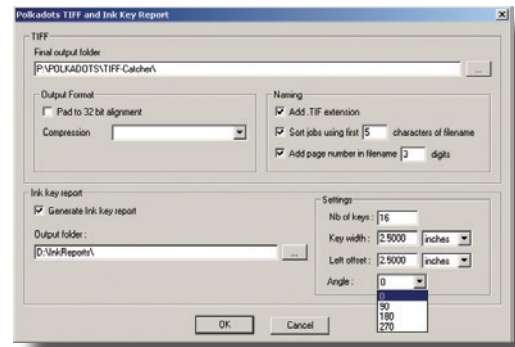

Install and Ready to Go in Minutes

Key-it installs quickly and lets you start working with ink presetting immediately. And since Key-it is a plugin to your existing RIP there is no additional hardware to buy and nothing new needs to be added to your press.
